EDUCATION

Georgia State University, J. Mack Robinson College of Business

MS Information Systems, AI for Business Innovation

BFA Graphic Design

Atlanta, GA

Expected Aug 2026

May 2023

EXPERIENCE

Kampgrounds of America, Inc.

Atlanta, GA

AI Engineering Intern

Mar 2026 - May 2026

- Built and deployed a **multi-agent AI pipeline** using Airia to automate group sales workflows across discovery, qualification, availability checks, scoring, and outreach.
- Reduced a fully manual process from hours to under 10 minutes, enabling scalable lead handling.
- Designed a **5-table database system** for real-time lead tracking, human review, and pipeline state management.
- Developed a React dashboard connected to live pipeline execution for monitoring and operator interaction.
- Diagnosed and resolved production issues across **APIs, data schemas, and authentication** to ensure reliability.

TRISP Studio

Atlanta, GA

Founder & Creative Technologist

Dec 2016 - Present

- Designed and deployed **AI-powered systems** including lead intake agents, automated email pipelines, and workflow automation tools used in active business operations.
- Built an **AI lead intake system** combining retrieval-based responses, **Google Calendar API integration** for real-time availability, and automated email drafting, improving response speed and increasing booking conversion.
- Implemented **operational systems** that reduced manual overhead and supported record revenue periods.
- Led creative direction for campaigns distributed through national record labels including Atlantic Records and Motown, operating across technical systems and high-visibility creative work.

PROJECTS

ML Research: Deepfake Detection | TensorFlow, Scikit-learn, Python

- Developed a **neural network model** using **RL-based active learning** to detect AI-generated media, improving model adaptability to new data patterns during training
- Engineered features and evaluated model performance using **scikit-learn** and **TensorFlow/Keras**, enabling systematic comparison of model accuracy and generalization
- Documented model design, experimentation process, and results in a structured research report, supporting reproducibility

RAG-Based AI System for Medicaid Policy Video Generation | Python, Pinecone, LangChain, n8n

- Built a **retrieval-based system** using **Pinecone + LangChain** to ensure factual consistency in policy explanations.
- Designed a pipeline that converts complex Medicaid policies into multilingual video content for families with IDD.
- Orchestrated **5+ APIs** using n8n to automate end-to-end generation in less than 15 minutes.
- Implemented **human in the loop review layers** for compliance, accuracy, and safety.

AI-Powered Sports League Management Platform | Python, PostgreSQL, APIs, Computer Vision

- Built and deployed a Discord-based platform supporting 300+ users across multiple leagues.
- Automated administrative workflows to support scaling across concurrent leagues.
- Developed an **image-to-structured-data pipeline** that reduced manual data entry by 80%.
- Designed a **Python + PostgreSQL** backend for scheduling, matchups, and league operations.

SKILLS

AI Systems: RAG • Multi-Agent Systems • Prompt Engineering • Structured Output Design • Human-in-the-Loop Systems

Engineering: Python • TypeScript • React • Next.js • PostgreSQL • SQL • REST APIs • Webhooks

Data & Infrastructure: Supabase • Vercel • Pandas • NumPy • API Orchestration • Workflow Automation

Product & Design: AI Product Design • Figma • Adobe Creative Suite • UX for AI Systems
